Open Boundary Quad-Ridge Horns

Main features

Technical performance
- Dual linear polarization with high polarization purity and isolation
- Low return loss / VSWR
- Wide bandwidth

Design
- Unique design preventing the excitation of unwanted higher order modes in the aperture
- Well-defined smooth radiation pattern throughout the operational bandwidth
- Lightweight for easy handling

Surface treatment
- Surtec 650 according to MIL-C 5541E class 3
- Polyurethane paint

Repeatability
- Stiff and robust mechanical design
- Standard MVG circular interface for precision centering
- Precision pins for accurate polarization alignment
- Precision machined
- High reliability coaxial connector

Delivered documents
- Typical performance data (TYMEDA™)
- Measured return loss data and port-to-port coupling

Product configuration

Equipment
- Mounting flange
- Integrated coaxial transition with high precision connector
- Circular polarization available with external hybrid coupler
- Protective radome for outdoor installation

Related services
- Calibration and maintenance
- Customization

SOLUTION FOR
- Low frequency PNF/CNF measurements
- Wideband antenna measurements in SNF and CATR systems
- Reflector feeds for high gain applications

The MVG protective radomes are designed to fit Dual Ridge Horns, allowing outdoor installation with minimum impact on electrical performance. The materials and coating employed provide hydrophobic properties and good UV stability, low relative permittivity and low dielectric loss, therefore offering an effective protection in outdoor conditions and good RF transparency. The radome enclosures are also equipped with pressure equalizing vents to reduce condensation caused by rapid changes in temperature, while preventing water and dust ingress.
