## MVG Joins GICAT to Strengthen Synergies with the French Defense Industry

Paris, April 28, 2025

Microwave Vision Group (MVG), a globally recognized French industrial player in electromagnetic measurement systems, announces its membership in GICAT (Groupement des Industries Françaises de Défense et de Sécurité Terrestres et Aéroterrestres – the French Land and Airland Defense and Security Industry Association).

This strategic move marks an important step in MVG's commitment to actively support the technological innovation dynamic driving the French defense sector, working alongside key industry players.

**"Joining GICAT reaffirms our commitment to act as a responsible and innovative industrial partner serving critical forces and infrastructures. It also strengthens our ability to co-develop, alongside major contractors and SMEs, the Defense systems of tomorrow."** — *Pierre Jurek, Deputy-CEO, MVG.*

With over 35 years of experience, MVG designs and delivers critical technologies for RF measurement, radar stealth validation, tactical antenna systems, EMC protection, and Hardware-In-the-Loop (HWIL) testing. MVG has established itself as a strategic supplier of high-value solutions for defense, aerospace, space, and secure telecommunications sectors.

Through GICAT membership, MVG aims to:

- Actively participate in sector-specific committees, especially those focused on innovation.
- Contribute to strategic discussions on the competitiveness of the French Defense Industrial and Technological Base (BITD).
- Increase its visibility at major industry events such as **Eurosatory** and **IDEX**, and benefit from the networking opportunities provided by the GICAT ecosystem, both in France and internationally.
